

# Roberto Biello

## Postdoctoral Researcher

University of Ferrara, Ferrara (Italy)

University of Florence, Florence (Italy)

## Visitor Fellow

John Innes Centre (UK)

## Research on

Demographic and evolutionary processes affecting populations.

I am particularly interested in genetic and genomic approaches to reconstruct population-level patterns and infer processes to study questions associated with local adaptation, genome evolution and wildlife conservation.

## Keywords

Population genetics, genomics, molecular ecology, conservation, phylogenetics, comparative genomics, landscape genetics, genome assembly and annotation, bioinformatics.

## I joined the course because

I want to improve my phylogenetic knowledge.

I am working on large-scale genome projects and focusing on comparative genomics analyses, so I want to learn novel approaches to properly use genomic resources for genome-scale phylogenetic inference.
